

Autostarting

On Raspian Stretch or newer releasers it is recommended to install the Systemd service template. For older systems you can alternatively install the Initd service wrapper. However, it is not recommended to install both at the same time!

Systemd Service Template

You need to perform the follow steps to install the service template:

```
wget https://raw.githubusercontent.com/pimatic/pimatic/master/install/pimatic.service
sudo cp pimatic.service /lib/systemd/system/
sudo chown root:root /lib/systemd/system/pimatic.service
sudo systemctl daemon-reload
sudo systemctl enable pimatic
```

It should now start with:

```
sudo systemctl restart pimatic
```

Alternatively you can also use the service command:

```
sudo service pimatic start
```

The log output is directed to: `pimatic-app/pimatic-daemon.log`

Deprecated: Initd Service Wrapper

On older systems you can alternatively the init.d service wrapper:

```
wget https://raw.githubusercontent.com/pimatic/pimatic/master/install/pimatic-init-d
sudo cp pimatic-init-d /etc/init.d/pimatic
sudo chmod +x /etc/init.d/pimatic
sudo chown root:root /etc/init.d/pimatic
sudo update-rc.d pimatic defaults
```

It should now start with:

```
sudo service pimatic start
```

The log output is directed to: `pimatic-app/pimatic-daemon.log`
