

Load your Plugin

Just add your plugin to your pimatic `config.json` file like any other plugin.

```
{
  "plugin": "my-plugin",
  "my-config-option": "some thing"
}
```

pimatic searches for a directory called `pimatic-my-plugin` in its parent `node_modules` directory and loads your plugin.

You should see the string "Hello World" in pimatic's output.
