

Locale

You can change your locale settings by editing the config.json file or using the pimatic build-in editor.

To set the locale and language of your pimatic installation, you need to add the locale option directly into the settings area:

```
settings": {  
  "locale": "de",  
  "httpServer": {  
    "enabled": true,  
    "port": 80  
  },  
  ...  
}
```

possible locales are: "en", "de", "es", "nl".

For more information see [pimatic configuration options](#)
